

Python Script to Executable (.exe) – Complete Guide

1. Introduction

This document explains how to convert a Python script into a standalone executable (.exe) file that can run on Windows systems without requiring Python installation.

2. Prerequisites

- Python installed
- Internet connection
- Working Python script

3. Install PyInstaller

```
python -m pip install pyinstaller
```

4. Basic Command

```
python -m PyInstaller --onefile your_script.py
```

5. Recommended Command

```
python -m PyInstaller --onefile --noconsole --icon=app.ico your_script.py
```

6. External Libraries

```
python -m pip install deep-translator
```

```
python -m PyInstaller --onefile --hidden-import=deep_translator your_script.py
```

7. Include Extra Files

```
python -m PyInstaller --onefile --add-data "file.txt;." your_script.py
```

8. Output

dist/your_script.exe → Share this file

9. Important Notes

- No Python required on target system
- Internet required for API-based tools
- Antivirus warning may appear
- First run may be slow

10. Conclusion

PyInstaller allows easy conversion of Python scripts into shareable executables.
